

## **AKO Mail Client: Android Configuration**

Use the following steps to configure your AKO mail with the built in Android email application:

NOTE: These steps were confirmed on the Droid Incredible, EVO and Thunderbolt but should be consistent with other Android based phones:

1. Open the Mail App
2. Enter your AKO email address and password and click 'Next'.
3. Incoming Server Settings:
  1. Select the IMAP Protocol
  2. The Username field will have your entire email address. Delete @us.army.mil (.ctr@us.army.mil if you are a contractor)
  3. IMAP Server should be imap.us.army.mil
  4. Select the SSL Security Type and ensure the Server Port is set to 993
  5. Press 'Next'
4. Outgoing Server Settings:
  1. SMTP Server should be mailrouter.us.army.mil
  2. Select SSL Security Type and ensure the Server Port is set to 465
  3. Press 'Next'

The following external link can also assist with configuring your AKO mail with the Android built in email application. If you are using an alternate application for email, you will need to consult your specific mail program's website for assistance.
